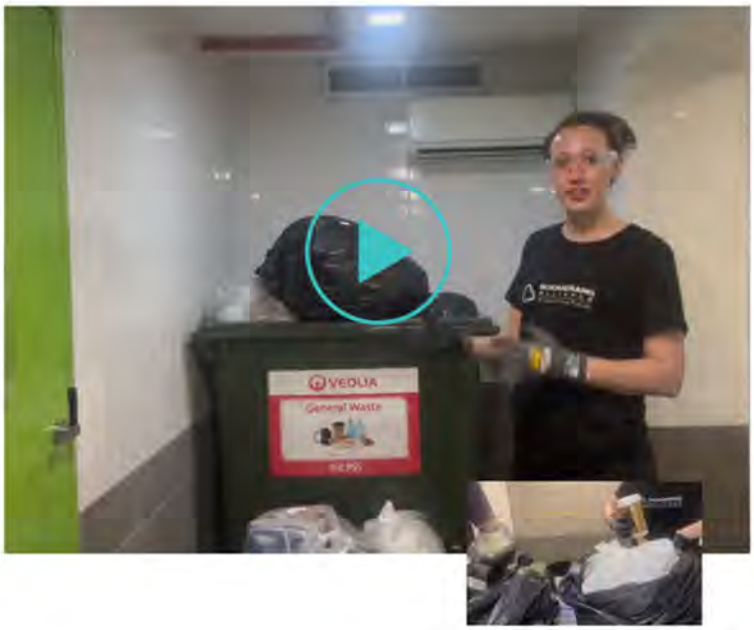
Vol. 01 JAN 2025

The Reuse News

Welcome to our first edition of The Reuse News, proudly brought to you by The Reuse Project. Stay up to date with how our workplace is going plastic free!

Waste Audit

The results are in! We have done our first waste audit from our workplace offices. Watch our video to find out the results.



We counted 500 single-use coffee cups and 230 lids in one week's collection from our workplace offices.

In one year, that will amount to 82.5kg of plastic, 562.5kg of timber and 921.1kg of C02 for the manufacturing of the cups!

Impact Calculator - What's the C02 and resources for SUP cups?

The choices we make can be profound. KeepCup and Edge Environment have created the Impact Calculator to quantify the effects of choosing reuse over single-use coffee cups.

Local Cafe welcomes BYO cups!

We've spoken with many local cafés near our workplace, and they all welcome BYO cups—some even offer discounts! Yet, most cups used in our community are still single-use.

Let's change that by championing reuse. Bringing your own cup or choosing to dine in not only reduces waste but also helps cafés save on packaging costs.
